

Plant list buds

Botanica GmbH • Industrie Nord • 5643 Sins • Switzerland • www.botanica.ch • +41 41 757 00 00

The following list contains buds. Buds or shoot tips contain embryonal tissue together with the vegetation points. This tissue is in the propagation phase and is rich in plant growth factors. The whole potency and vitality of the plant is concentrated in the bud.

Botanica processes the corresponding plants into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some buds are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our buds. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
