

Plant list cereals

Botanica GmbH • Industrie Nord • 5643 Sins • Switzerland • www.botanica.ch • +41 41 757 00 00

The following list contains cereals. Cereals or corn are the one-year-old plants of the family of sweet-grasses cultivated on account of their grains. The fruits serve as basic foodstuffs for human consumption or as animal feed, but also as a raw material for the production of cosmetic and technical products.

Botanica processes the corresponding raw materials into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some plants are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our plants. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
