

Plant list fruits & vegetables

Botanica GmbH • Industrie Nord • 5643 Sins • Switzerland • www.botanica.ch • +41 41 757 00 00

The following list contains fruits and vegetables. The fruit of a plant is the totality of the organs, which originate from a flower and which surround the plant seeds to their maturity. Vegetables are a collective term for edible parts of plants growing wild or cultivated. Fruits and vegetables contain many vitamins and minerals.

Botanica processes the corresponding plants into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some plants are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our plants. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
