

Product list flavonoids

Botanica GmbH • Industrie Nord 14 • 5643 Sins • Switzerland • www.botanica.ch • +41 41 757 00 00

The following list contains extracts in glycerine/water, with flavonoids. Flavonoids also include anthocyanins (natural colours) and are members of the polyphenol group (secondary plant substances). Flavonoids are widespread in the plant kingdom and therefore also occur in foodstuffs. Among other qualities they possess antioxidant and anti-inflammatory properties. A number of flavonoid-rich plants are also used in medicine. Flavonoids are predominantly water soluble and therefore undetectable in oil soluble carrier materials. The products listed below are not standardised products with guaranteed minimum flavonoid content.

The following products can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some products are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our products. If you are looking for specific products for your formulation, we are looking forward to your contact.
