Botanica[®]
An Evonik company.

My plant extracts, naturally

The following list contains plants which are bio certified. Since November 2014, Botanica has been certified organic in accordance with the Swiss Organic Produce Regulation. This organic certification offers you the following benefits:

- General and official recognition as organic (Switzerland and the EU)
- Independent of private organic certification standards
- Declaration of proportion of organic ingredients becomes more transparent

Botanica processes the corresponding plants into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some raw materials are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our raw materials. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
