Botanica[®]
An Evonik company.

My plant extracts, naturally

The following list contains plants that suit adolescents. The word teenager is English and refers to young people between the ages of 13 and 19. The development from child to adulthood is often experienced as intense and involves many different phases. The hormonal changes can also worsen the appearance of the skin, it can form impurities and the increased production of sebum can occur and the skin is greasy and partially reddened. Natural plant extracts with antiseptic or antimicrobial ingredients can be an ideal complement to formulations for youthful problem skin.

Botanica processes the corresponding plants into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some plants are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our plants. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
