---

The following list contains raw materials which are related to water. These include, on the one hand, plants with a high water content and on the other, plants which, by name, are associated with water. Switzerland, which is also known as the “water tower of Europe”, additionally, offers a large number of different types of water that boast a diverse range of interesting properties.

Botanica processes the corresponding raw materials into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some raw materials are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our raw materials. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
