Botanica[®]
An Evonik company.

My plant extracts, naturally

The following list contains different plants. Plants are living organisms which possess cell nuclei and cell membrane. The field of biology, which deals scientifically with the study of plants, is botany. According to today's estimates, between 320'000 and 500'000 plant species exist on earth.

Botanica processes the corresponding plants into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some plants are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our plants. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
